

A. Introduction

- a) The following is the procedure for the proper completion of an electronic patient care report (ePCR) as required by Florida Statute, Florida Administrative Code and the Miami-Dade Fire Rescue (MDFR) Department.
- b) An individual ePCR will be completed for each EMS related call received. This includes special assignments, such as falling out of bed, any call where no patient is found, where the patient was gone on arrival (GOA), or calls where a person refuses treatment for any reason. If your assessment of an individual's condition suggests that it is non-emergent in nature, a complete ePCR is still required.
- c) An ePCR report that has been started must be completed.
